PATENT NO. 6812339

GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES AS:
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF
FILE REFERENCE: CL001307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT FILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR PILING DATE: 2000-10-20

PRIOR PILING DATE: 2000-10-03

PRIOR APPLICATION NUMBER: 60/231,768

PRIOR FILING DATE: 2000-09-08

PRIOR FILING DATE: 2000-09-08

PRIOR APPLICATION NUMBER: 60/231,498

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPRT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster

Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoRV sites of the pcMVSPORT 6 vector. Library was not normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster 7663.f For more information about this cluster, see http://www.genoscope.cns.fr/cdna?s=CSODE013DH01QP1&c=7663.f. 18t strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
18t strand cDNA was primed cDNA was digested with Not I and cloned
18t end enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned
18t enriched, double-strand cDNA was digested with Not I and cloned

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               For more information about this cluster, see http://www.genoscope.cns.fr/cdna?s=CSODIO69AF11QP1&c=7663.f. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was constructed by Life Technologies, a was normalized. Library was constructed by Life Technologies a division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            http://www.genoscope.cns.fr/cdna?s=CSODIOO8ADO4NP1&c=7663.f.

Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 (bases 1 to 973)

oncogene tyrosine kinase (poTK). The poTK polynuclectides and protein may
be used in the prevention, diagnosis and treatment of diseases associated
with inappropriate poTK expression, such as lung and kidney tumours,
leukemia and stomach adenocarcinoma. poTK may be used to treat disorders
associated with decreased expression by rectifying mutations or deletions
in a patient's genome that affect the activity of poTK by expressing
inactive proteins or to supplement the patients own production of poTK.
The encoded poTK may be used as an antigen in the production of
antibodies against poTK and in assays to identify modulators of poTK
expression and activity. The anti-poTK antibodies and antagonists may be
used to down regulate expression and activity and as diagnostic agents
for detecting the presence of poTK in samples. The present sequence
represents a cDNA encoding the human poTK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Local Similarity

```

New human kinase protein, useful for treating or diagnosing disorders associated with an absence of, inappropriate, or unwanted expression of the protein, e.g. inflammation or cancer, in drug screening assays and pharmacogenomics.

Claim 4 (b); Fig 1; 75pp; English.

The invention relates to a newly isolated peptide sequence of a human CC kinase that is related to the proto-oncogene tyrosine kinase subfamily. CC The activity of the kinase of the invention may be described as, CC cytostatic, antiarteriosclerotic, antiinflammatory and antipsoriatic. CC Peptides of the invention are useful in assays to determine the CC biological activity of the protein, in drug screening assays, tissue CC diagnosing disorders characterised by an absence of, inappropriate, or CC unwanted expression of the protein, such as inflammation, cancer (e.g. celakaemia, lung tumours, kidney tumours or stomach adenocarcinoma), CC arteriosclerosis, and psoriasis. Nucleic acid molecules of the invention CC are useful as probes, primers and chemical intermediates in biological cassays. The peptide and nucleic acid sequences are useful as models for the development of human therapeutic targets, aid in the identification cof therapeutic agents that modulate kinase protein activity in cells and clasues that express the protein. The protein of the invention may also be useful in gene therapy. The gene encoding the protein may also compresents the human chromosome 15. The current sequence

The peptide is useful for preparing a composition for treating a disease or condition mediated by a human kinase protein e.g. cancer. The present sequence represents the human proto-oncogene tyrosine kinase cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 4; SEQ ID NO 1; 53pp; English.

New human kinases and phosphatases, useful for diagnosing, treating preventing atherosclerosis, hypertension, AIDS, allergy, multiple sclerosis, osteoarthritis, Alzheimer's disease, Crohn's disease, car or hepatitis.

Claim 5; SEQ ID NO 65; 347pp; English.

The invention relates to a novel isolated polypeptide which is a human cc kinase and phosphatase (KPP). The polypeptide of the invention cc demonstrates cardiovascular, antiarteriosclerotic, hypotensive, cantintopic, antiantianginal, anti-HIV, antiallergic, corrective, immunosuppressive, antityproid, dermatological, acc antidiabetic, nephrotropic, antigout, gastrointestinal, neuroprotective, corrective, corrective, corrective, antiparatic, opthalmological, antiparatic, crossensian, nootropic, anticonvulsant, hepatotropic, antiparatic, crossensian, reprotozoacide and fungicide activities. The crossensial, virucide, protozoacide and fungicide activities. The crossensial virucide, protozoacide and fungicide activities and crossensial crossensial for diagnosing, treating or preventing crossensial such as cardiovascular diseases, immune system disorders, cell crossensial disorders and viral, bacterial, fungal, parasitic, cell protozoan or helminthic infections. Furthermore, the molecules of the crossensial to model human crossensial canimals to model human crossensial control to the invention.
